051317 REV A - 8-SEPT-2014

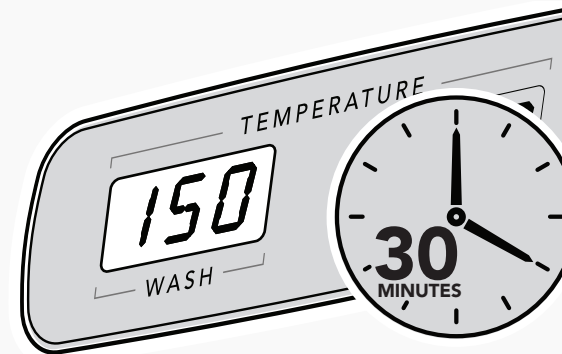

- 1** Check chemical levels in containers

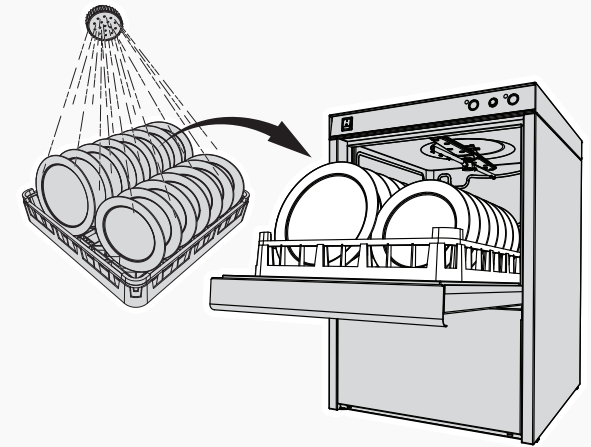

- 2** Flip **ON/OFF** switch to **ON** position

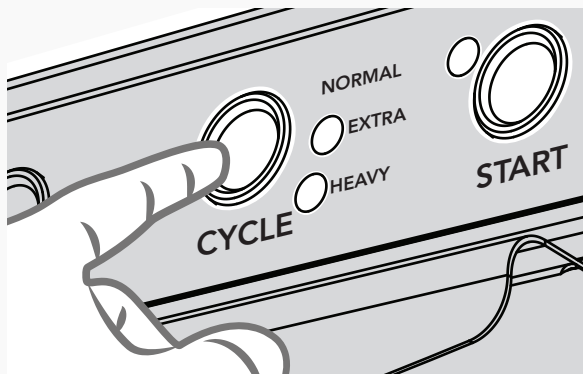

- 3** Wait 30 minutes for temperature gauge to read 150°F/66°C

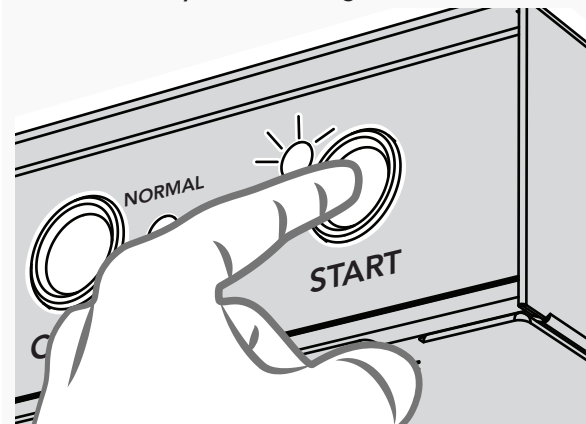

- 4** Prescrap wares and load into rack before loading rack into dishwasher.

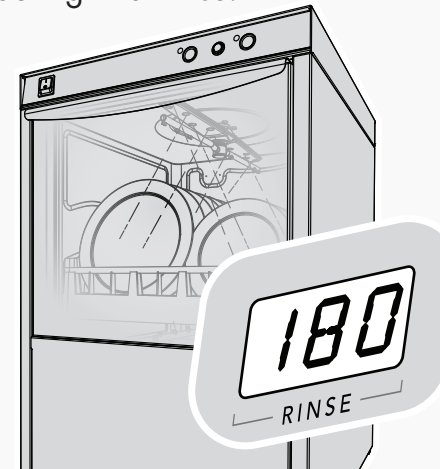

- 5** Press the **CYCLE** button to toggle between **NORMAL**, **EXTRA** or **HEAVY** settings to increase wash time. **NORMAL** is the default and indicated when no lights are lit.

- 6** Close door, press and hold **START** button for 1 second and green in-cycle light will indicate the cycle has begun

- 7** Final rinse temperature should be a minimum of 180°F/82°C during final rinse.

- 8** Wash cycle is extended if the final rinse temperature is not maintained at 180°F/82°C. Machine will begin Heat Recovery cycle after rinse cycle.

- ☒ The cycle is completed when the green light is no longer lit.

You may now remove your clean wares.

Exercise caution handling wares as they may be hot.
